Getting Started Guide:

## Installing WebPager

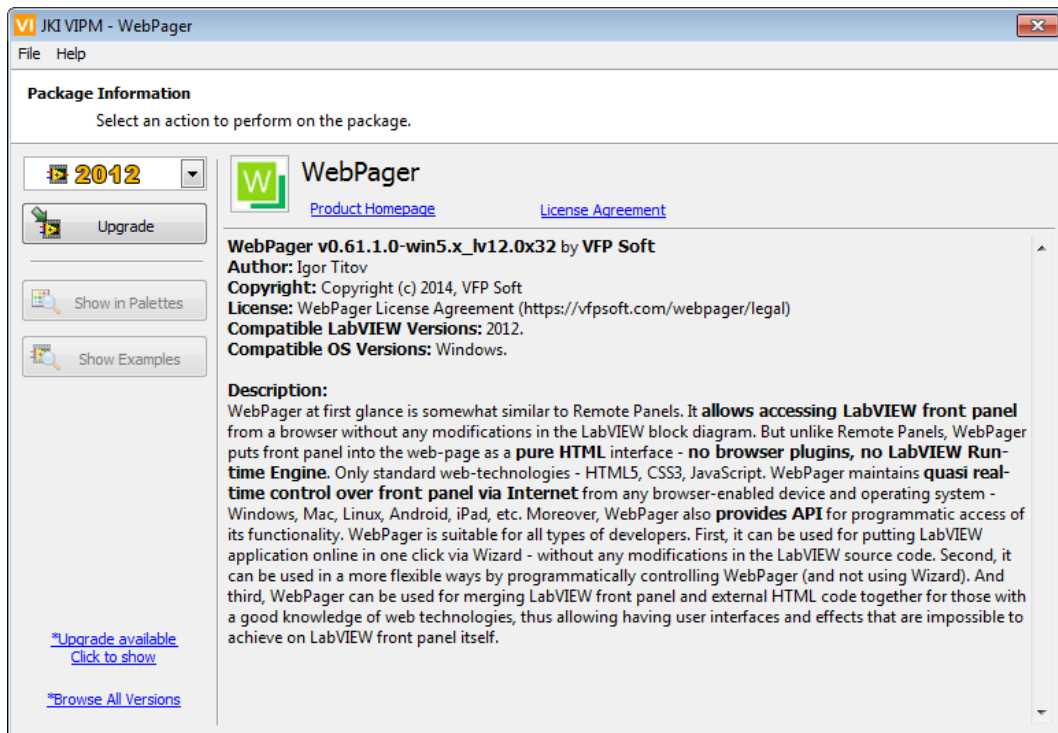

January 2015

Let's see how to install the WebPager software. It will be done in two steps.  
If in doubt, [watch video tutorial 1 on documentation page](#).

**Step 0:** Download appropriate OGP package. More on this in the previous [getting started tutorial 'Downloading WebPager'](#).

**Step 1:** After you downloaded WebPager (if you didn't, first read "Getting Started Guide – Downloading WebPager" and follow instructions there) you can open it (e.g.,  [vfp\\_soft\\_com\\_webpager-0.61.3-0.ogp](#)) with VIPM (VI Package Manager) and it will open installation wizard where you should go through all required steps.

Namely, press "Install"  (or "Upgrade"  ) button, then "Continue", then read License Agreement and if you agree, press "Yes", then press "Finish" button.

Press 'Install' or 'Upgrade' button.
